

#### **Maximus**

Part No:

FXUB66.54.0150C

#### **Description:**

Flexible Wide Band 5G/4G Antenna 600-6000MHz

#### **Features:**

Ground Plane Independent

600-6000MHz Wideband

5G/4G fully operational on all Sub-6GHz bands

Efficiencies up to 80% on all cellular bands (600-6000MHz)

120.4 x 50.4 x 0.2 mm size

Connector: I-PEX MHF®4L HSC Compatible

Cable: 150mm of Ø1.37

CE Certified

RoHS & REACH Compliant

CE

#### 1. Introduction

The patented Maximus FXUB66 flexible wideband antenna has been designed to cover all working frequencies in the 600-6000 MHz spectrum, including all Cellular(5G/4G/3G/2G), NB-IoT, Cat-M, Wi-Fi, ISM and GNSS bands. Its use in a device improves substantially the radiated power and sensitivity, and enables the highest throughput rates of today's broadband devices.

The antenna is delivered with a flexible body with ground breaking high efficiencies on all bands, ground-plane independent, with a cable and connector for easy installation. It is made of durable flexible polymer, with a peak gain of 5dBi, an efficiency of more than 60% across all cellular bands and is designed to be mounted directly onto a plastic or glass enclosure / cover.

At 120.4x50.4x0.2mm, the antenna is ultra thin. It is assembled by a simple "peel and stick" process, attaching securely to non-metal surfaces via 3M adhesive. It enables designers to use only one antenna that covers all frequencies and future proofs device design for 5G and 4G globally. It is also the ideal antenna to fit in devices that are being retrofitted with wireless functionality, as it will cover non cellular applications such as 868, 915MHz or Zigbee applications. Its inherently wide bandwidth is more resistant to detuning than traditional small but narrow-band legacy antennas.

The Maximus antenna has a unique hybrid design. Within one antenna structure the electromagnetic waves travel in two predominant propagation modes - one for lower frequencies, (e.g. 5G/4G at 600 MHz) and the other for higher 5G/4G and Wi-Fi frequencies up to 6GHz.

It is an ideal choice for any device maker that needs to keep manufacturing costs down over the lifetime of a product, as the same antenna can be used if the radio module is upgraded to work on a different frequency band.

The FXUB66 uses a future proof I-PEX MHF® 4L connector for 5G applications to match the many module providers new 5G modules who utilize this smaller receptacle.

Cables and Connectors are fully customizable, subject to MOQ, for further information please contact your regional Taoglas Customer support team.

## 3. Antenna Characteristics

#### 3.1 Return Loss

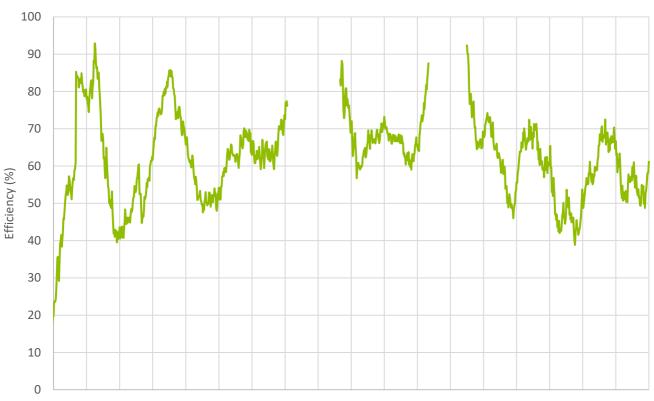

#### 3.2 VSWR

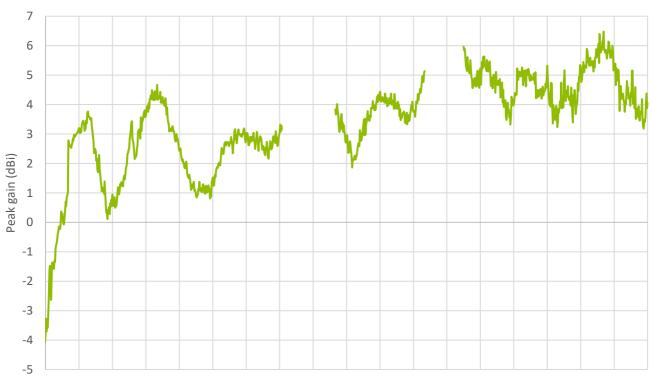

### 3.3 Efficiency

600 900 1200 1500 1800 2100 2400 2700 3000 3300 3600 3900 4200 4500 4800 5100 5400 5700 6000 Frequency (MHz)

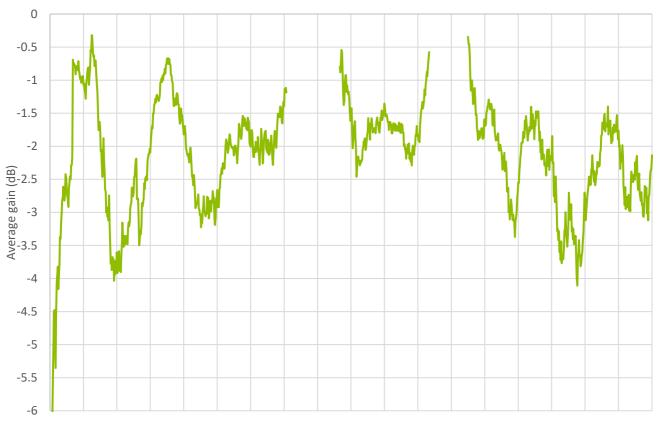

#### 3.4 Peak Gain

600 900 1200 1500 1800 2100 2400 2700 3000 3300 3600 3900 4200 4500 4800 5100 5400 5700 6000 Frequency (MHz)

## 3.5 Average Gain

600 900 1200 1500 1800 2100 2400 2700 3000 3300 3600 3900 4200 4500 4800 5100 5400 5700 6000 Frequency (MHz)

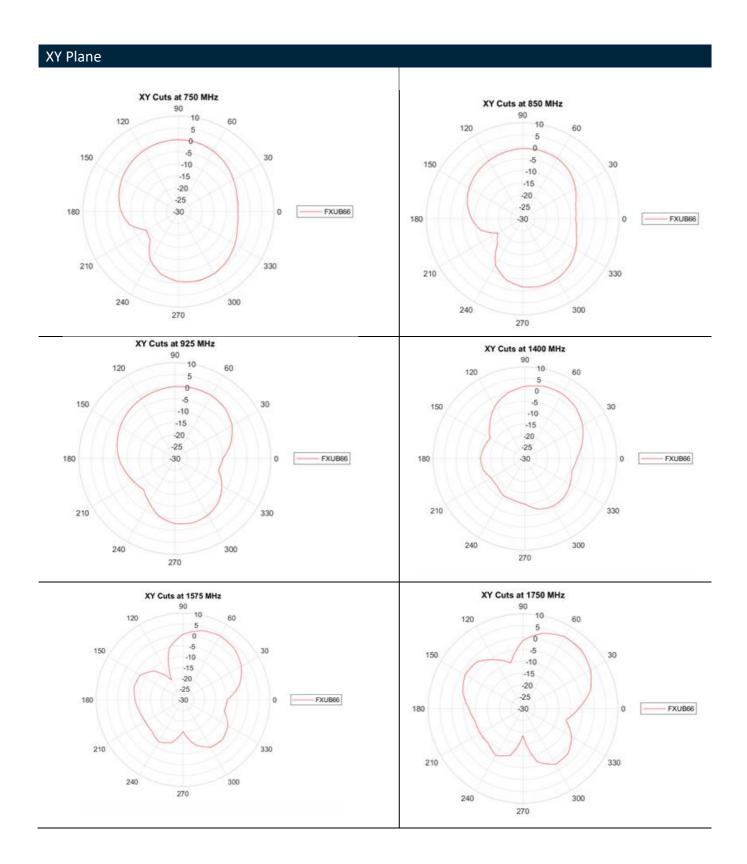

# 4. 2D Radiation Patterns

## 4.1 Test Setup

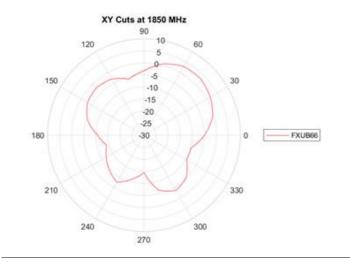

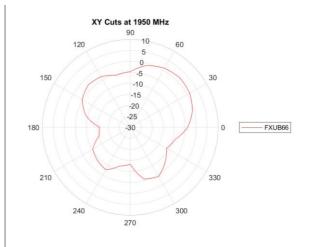

On 2mm ABS

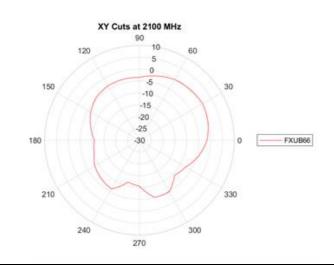

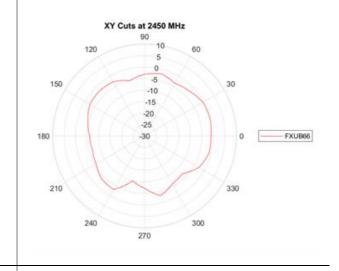

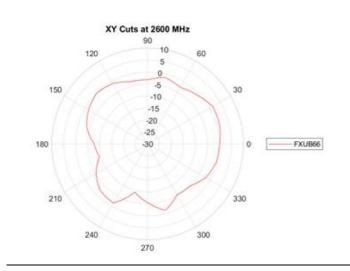

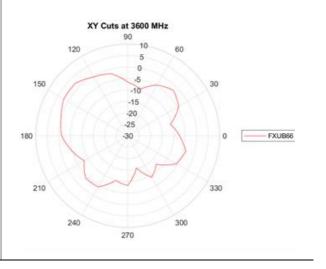

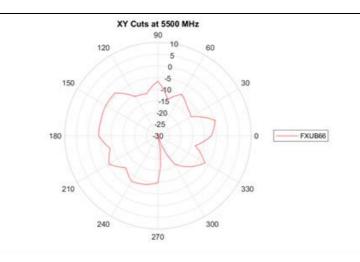

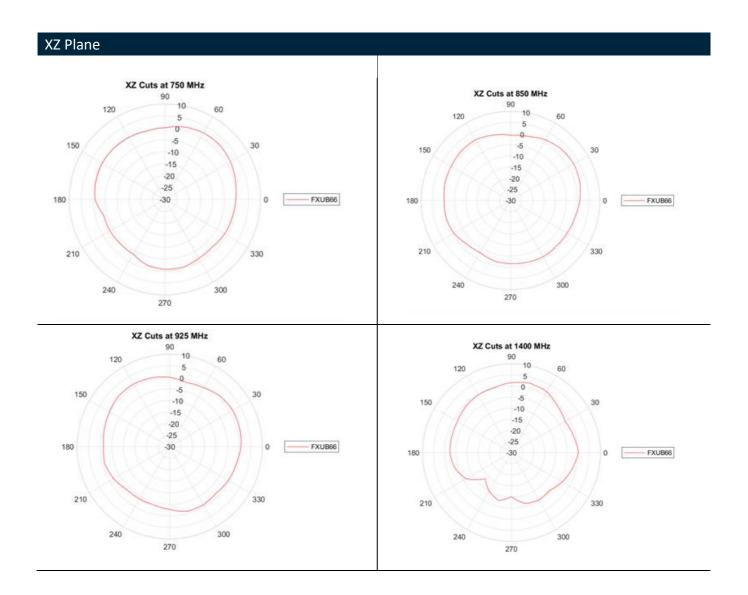

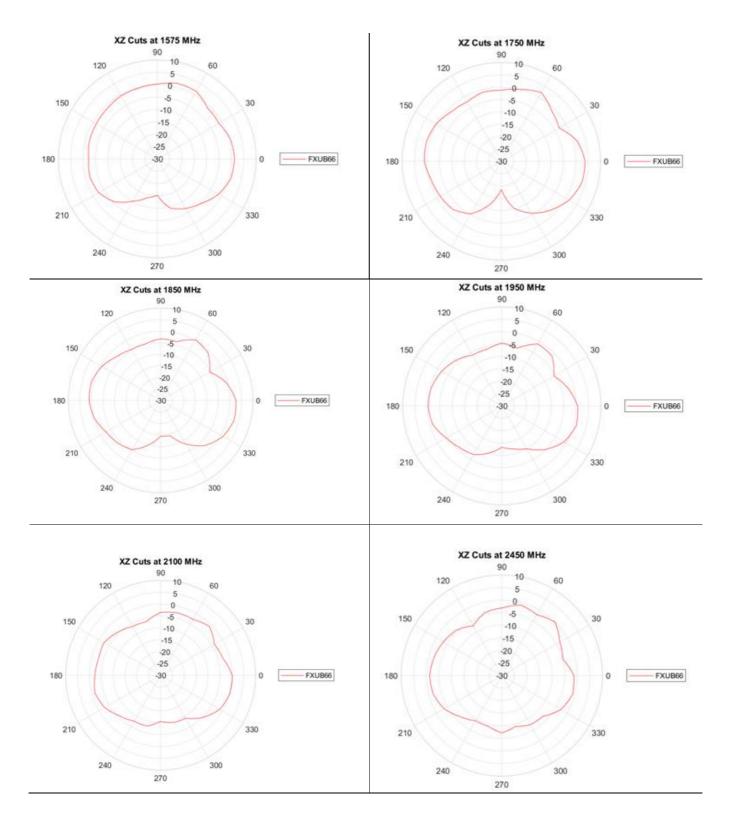

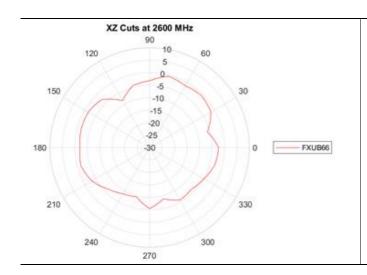

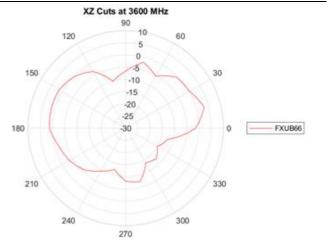

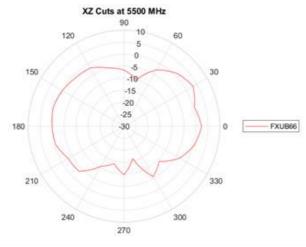

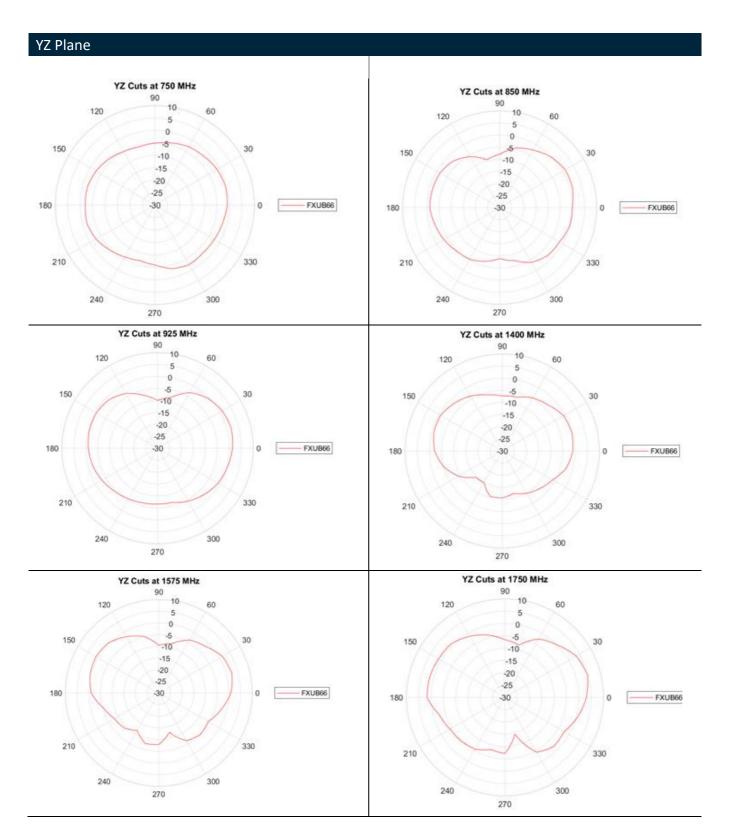

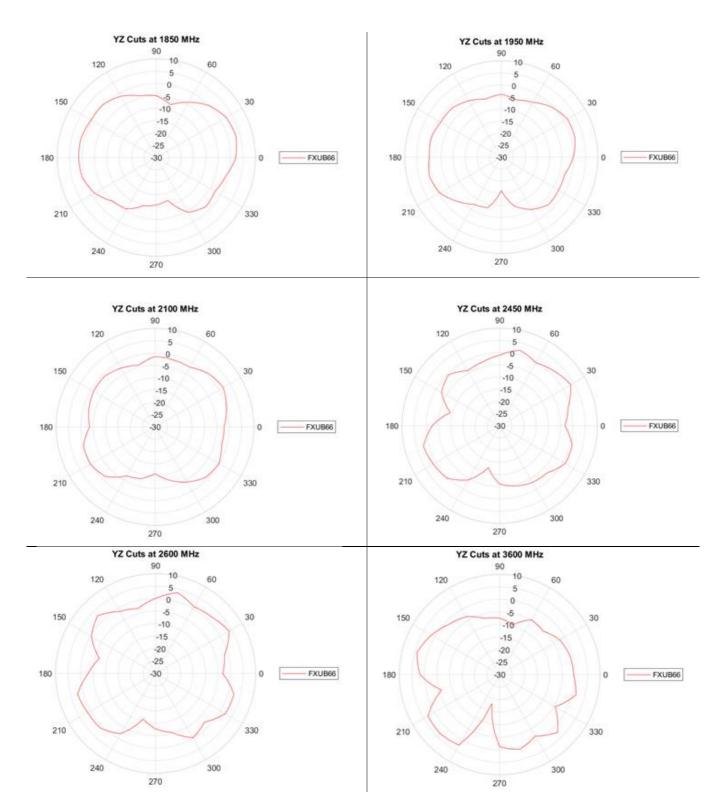

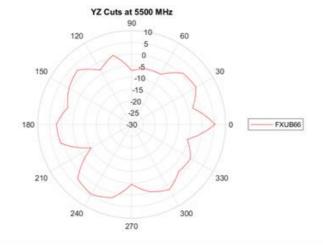

## Mechanical Drawing (Units: mm)

ISO NO.: EDW-20-8-0841 STATE: Release

NOTES: 1. No dregs or insufficient soldering. Solder thickness 0.3~1.7mm.

2. The solder must be smooth and full to the edges of the pod.
The solder must not extend outside of the pod area.

3. The connector position has special orientation to the PCB as per drawing.

4. All related material must be RoHS compliant.

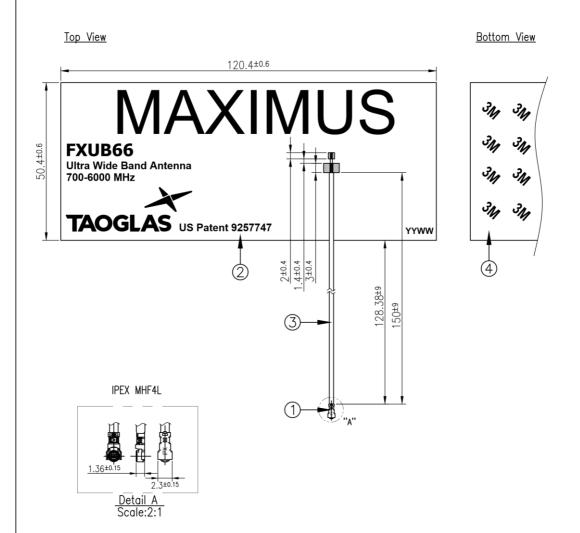

5. Open/short QC, VSWR required.

6. Soldered area.

7. Dimension marked on drawing important dimensions,need to be included in QC check.

8. No burrs, spots or scratches.
